

AAPOR Transparency Initiative Information

U.S. Adults
Nationwide
July 24 - July 28, 2020

In addition to our reported topline, crosstabs, and a methodology summary we also provide the following disclosure items in accordance with the American Association for Public Opinion Research (AAPOR) Transparency Initiative.

ITEM	ELEMENT DETAILS	RESPONSES
1	Sponsor and conduct	This survey was sponsored and run by Optimus Analytics.
2	Exact question and response wordings (including interviewer or respondent instructions)	See question and response wordings in our topline reports, linked here: US Adults: https://github.com/optimus-forecasting-and-polling/Optimus-Coronavirus-Tracking
3	Population under study and geographic location	U.S. Adults
4	Dates of data collection	Fielded from July 24 to July 28, 2020
5	Sampling frame(s) and coverage of target population	The target population for this study was contacted using the Dynata Web Panel platform "Samplify" with the target population reached according to joint distributions for U.S. Census Region, age-group, and gender representative of U.S. adults and marginal distributions by race and education.
6	Name of sample (or sampling frame) supplier	Dynata Web Panel
7	Method of recruitment	Invitation-Only panelist recruitment where panelists are originally contacted by web advertisements (conducted by Dynata)
8	Description of sample design	N/A
9	Method, mode, and language of survey	Online web survey, English-only.
10	Sample size and precision	Each sample was designed to be representative of U.S. adults Tracking Survey: n = 1039 (+/- 3.9%) Considering the use of a nonprobability survey, this current project is unable to estimate a standard probabilistic margin of error. The 95% credibility intervals

11	Weight calculation, including variables used and the sources of weighting parameters	<p>provided above are conservative estimates based on the model described in section 11. The intervals presented here represent the largest interval for a question response for each survey (not including branched questions) so as to provide conservative estimates. Final estimates for this survey were calculated using Bayesian model-based post-stratification with items weighted according to respondents' gender, age category (4), U.S. Census Region, party identification, and an interaction between race and education.</p> <p>Post-stratification estimates were calculated using an internal model using the L2 voter file and the 2018 CCES.</p> <p>Sources for Weighting Parameters:</p> <ul style="list-style-type: none"> - L2 voter file - 2018 Cooperative Congressional Election Study
12	Contact for more information	Alex Alduncin at alex@optimus.com
